CAFCO BLAZE-SHIELD II has been extensively tested for fire resistance and is rated for up to 4 hours for floor assemblies, beams, joists, columns, roof assemblies and walls and partitions.

- Classified by UL in accordance with ANSI/UL 263 (ASTM E119)
- Classified by UL in accordance with CAN/ULC-S101 (ASTM E119)

CAFCO BLAZE-SHIELD II has also been tested for surface burning characteristics in accordance with ASTM E84 and is rated Class A.

Flame Spread: 0
Smoke Developed: 0

CODE COMPLIANCES
CAFCO BLAZE-SHIELD II satisfies the requirements of the following:
- IBC® - INTERNATIONAL BUILDING CODE® (ICC ESR-1649)
- NBC - National Building Code of Canada

MAJOR SPECIFICATIONS
CAFCO BLAZE-SHIELD II complies with the requirements of the following specifications:
- MasterSpec®, Section 078100 APPLIED FIREPROOFING (AIA)
- MasterFormat® 2014, Section 07 81 00 Applied Fireproofing (CSC,CSI)
- Unified Facilities Guide Specification, UFGS 07 81 00 Spray-Applied Fireproofing (USACE, NAVFAC, AFCEC, NASA)
- Master Construction Specifications, Number 07 80 10 Applied Fireproofing (VA)
- Code of Federal Regulations, Title 40 Protection of the Environment (EPA)
- PBS-P100 Facilities Standards for the Public Buildings Services (GSA)
SECTION 070100 - APPLIED FIREPROOFING

The following is an outline/short language specification. Complete specifications for Spray-Applied Fire Resistive Materials are available on various media upon request.

PART 1 - GENERAL

1. Work Included

1.1.1 Provide all labor, materials, equipment and services necessary for and incidental to, the complete and proper installation of all sprayed fire protection and related work as shown on the drawings, or where specified herein, and in accordance with all applicable requirements of the Contract Documents.

1.2 The material and installation shall conform to the applicable building code requirements of all authorities having jurisdiction.

1.3 Quality Assurance

1.1 Work shall be performed by a firm with expertise in the installation of the fire protection or similar materials. This firm shall be recognized or otherwise approved by the spray-applied fire resistive material manufacturer.

1.2 Before proceeding with the fire protection work, approval of the proposed material thicknesses and densities shall be obtained from the architect and other applicable authorities having jurisdiction.

1.4 Related Sections

1.4.1 SECTION 052100 - SPACE DIVIDING

1.4.2 SECTION 070100 - THERMAL INSULATION

1.4.3 SECTION 071203 - INTUMESCENT FIREPROOFING

1.4.4 SECTION 071443 - JOINT FIRESTOPPING

1.5 References

A. ASTM E34 – Surface Burning Characteristics of Building Materials

B. ASTM E119 – Fire Tests of Building Construction and Materials

C. ASTM E136 – (Noncombustibility) Behavior of Materials in a Vertical Tube Furnace at 750°C

D. ASTM E805 – Thickness and Density of Sprayed Fire-Resistive Materials Applied to Structural Members

E. ASTM E736 – Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members

F. ASTM E799 – Effect of Deflection of Sprayed Fire-Resistive Materials Applied to Structural Members

G. ASTM E760 – Effect of Impact on Bonding of Sprayed Fire-Resistive Materials Applied to Structural Members

H. ASTM E761 – Compressive Strength of Sprayed Fire-Resistive Materials Applied to Structural Members

I. ASTM E859 – Air Erosion of Sprayed Fire-Resistive Materials Applied to Structural Members

J. ASTM E937 – Corrosion of Steel by Sprayed Fire-Resistive Materials Applied to Structural Members

1.5 Submittals

1.5.1 Manufacturer’s Data: Submit Manufacturer’s specification and listing identifying certificate (if required) to be shown material compliance with Contract Documents.

1.5.2 Test Data: Independent laboratory test results shall be submitted for all specified performance criteria.

1.6 Delivery, Storage and Handling

1.6.1 Deliver materials to the project manufacturer’s unofficed packages, fully identified as to type and quality, and having complete identifying data. Packaging shall bear the US labels for fire hazard and fire- resistance classifications.

1.6.2 Store materials above ground, in a dry location, protected from the weather. Damaged packages found unsuitable for use shall be rejected and removed from the project.

1.7 Project Conditions

1.7.1 When the prevailing outdoor temperature at the building site is less than 40°F (4°C) and air temperature and ambient temperature of 40°F (4°C) shall be maintained prior to, during, and a minimum of 24 hours after application of sprayed fire resistive material. If necessary for job progress, General Contractor shall provide enclosures and heat to maintain proper temperatures and humidity levels.

1.7.2 General Contractor shall provide ventilation to allow drying of the sprayed fire protection during and subsequent to its application.

1.7.2.1 Ventilation must not be less than 4 complete air exchanges per hour until the material is dry. When spraying in enclosed areas such as basements, stairwells, shafts, and small rooms, additional air exchanges may be necessary.

1.8 Scheduling/Sequencing

1.8.1 All fire protection work on a floor shall be completed before proceeding to the next floor.

1.8.2 The Contractor shall cooperate in the coordination and scheduling of the fire protection work to avoid delays in job progress.

PART 2 - PRODUCTS

2.1 Acceptable Manufacturers

2.1.1 The spray-applied fire resistive material shall be manufactured under the CAFCO® brand name, by authorized manufacturers.

2.2 Materials

2.2.1 Materials shall be CAFCO BLAZE-SHIELD®, (UL) - Underwriters Laboratories, Type I® to conform to the drawings, specifications and following test criteria:

2.2.1.1 Cohesion/Adhesion: When tested in accordance with ASTM E759, the material shall not crack or delaminate when the non-concrete topped galvanized deck to which it is applied is subjected to a one-time vertical centered result on a downward deflection of 1/20th of the span.

2.2.1.2 Bond Impact: When tested in accordance with ASTM E670, the material shall not crack or delaminate from the concrete topped galvanized deck to which it is applied.

2.2.1.3 Cohesion/Adhesion (bond strength): When tested in accordance with ASTM E760, the material applied over uncoated or galvanized steel shall have an average bond strength of 150 psf (7.27 kPa)

2.2.1.4 Air Erosion: When tested in accordance with ASTM E859, the material shall not be subject to losses from the finished application greater than 0.025 grams per sq. ft. (0.27 grams per square meter).

2.2.1.5 Compressive Strength: When tested in accordance for ASTM E417, the material shall withstand more than 90% percent when subjected to a compressive force of 750 psf (35.9 kPa).

2.2.1.6 Spray Manufactured Thickness: When tested in accordance with ASTM E937, the material shall not promote corrosion of steel.

2.2.1.7 Noncombustibility: When tested in accordance with ASTM E136 or CAN-ULC-S114, the material shall be noncombustible.

2.2.1.8 Surface Burning Characteristics: When tested in accordance with ASTM E84 or CAN/ULC-S102, the material shall exhibit the following surface burning characteristics:

Flame Spread: ______ 0 Smoke Developed: ______ 0

2.2.1.9 Density: When tested in accordance with ASTM E605, the material shall meet the minimum individual and average density values as listed in the applicable UL / ULC design or as required by the authority having jurisdiction.

2.2.2 The material shall have been tested and classified by Underwriters Laboratories (UL) or Underwriters Laboratories of Canada (ULC) in accordance with the procedures of UL 263/ASTM E119, or CAN/ULC-S101.

2.2.3 The sprayed fire resistive materials shall be applied at the approximate minimum thickness and density to achieve the following ratings:

Flame resistivity __hr.

Roof assemblies __hr.

Bears __hr.

Girders __hr.

Columns __hr.

Joists __hr.

2.2.4 Potable water shall be used for the application of spray-applied fire resistive materials.

2.2.5 Spray-applied fire resistive materials shall not be subject to different adhesives. Material manufacturer shall provide certification of such upon request.

PART 3 – EXECUTION

3.1 Preparation

3.1.1 All surfaces to receive sprayed fire resistive material shall be free of oil, grease, loose mill scale, dirt, paint/primer or other foreign materials which would impair satisfactory bonding to the surface. Manufacturer shall be contacted for procedures on handling primed/painted steel. Any cleaning of surfaces to receive sprayed fire protection shall be the responsibility of the General Contractor or Subcontractor as outlined in the structural steel or steel deck section.

3.1.2 Clips, hangers, supports, sleeves and other attachments to the substrate shall be placed by others prior to the application of spray-applied fire resistive materials.

3.1.3 The installation of ducts, piping, conduit or other suspended equipment shall not take place until the application of spray-applied fire resistive materials is complete in an area.

3.1.4 The spray-applied fire resistive material shall only be applied to steel deck which has been fabricated and erected in accordance with the criteria set by the Steel Deck Institute.

3.1.5 When roof traffic is anticipated, as in the case of equipment, shipping and storage, portions thereof shall be installed as a walkway to distribute loads.

3.2 Application

3.2.1 Equipment, mixing and application shall be in accordance with the manufacturer’s written application instructions.

3.2.2 The application of spray-applied fire resistive material to nonstructural steel shall not commence until the roofing system is completed and inspected, and all employees are complete, all mechanical units have been placed and after construction roof traffic has ceased.

3.2.3 The application of spray-applied fire resistive material to the underside of roof deck shall not commence until the roofing system is completed and tight, all penetrations are complete, all mechanical units have been placed, and after construction roof traffic has ceased.

3.2.4 The spray-applied fire resistive material shall not be applied to steel floor decks prior to the completion of concrete work on that deck.

3.2.5 The application of spray-applied fire resistive material to the undersides of roof deck shall not commence until the roofing system is completed and tight, all penetrations are complete, all mechanical units have been placed, and after construction roof traffic has ceased.

3.2.6 Prior to application of the work in this section, equipment shall be removed and all surfaces not to be sprayed shall be cleaned to the extent previously agreed to by the contractor and General Contractor.

3.3 Inspection and Testing

3.4.1 The spray-applied fire resistive material shall be tested for thickness and density in accordance with one of the following procedures:

ASTM E605 – Standard Test Method of Sprayed Fire-Resistive Materials Applied to Structural Members

IBC INTERNATIONAL BUILDING CODE® CHAPTER 17 STRUCTURAL TESTS AND SPECIAL INSPECTIONS Section 1704 Special Inspections

Product Availability

Isolatek International Spray-Applied Fire Resistive Materials are available to trained, recognized applicators around the world from strategically located production and distribution points in the U.S., Canada, Mexico, Europe and the Pacific Basin.

ISOLECT INTERNATIONAL is registered with the AIA Continuing Education System (AIA/CES)

We support our customers with unsurpassed technical expertise and customer service, complemented by an extensive global network of experienced sales representatives and recognized applicators. For detailed product information or for the name of the sales representative in your area please contact us.

The performance data herein reflect our expectations based on tests conducted in accordance with recognized standard methods under controlled conditions. The applicant, general contractor, property owner and/or user MUST read, understand and follow the directions, specifications and/or recommendations set forth in Isolatek International’s publications concerning use and application of these products, and should not rely merely on the information contained in this product data sheet. Isolatek International is not responsible for property damage, bodily injuries, consequential damages, or losses of any kind that arise from or are related to the applicator’s general contractor’s, property owner’s failure to follow the recommendations set forth in Isolatek International’s publications. Failure of these products shall be subject to the Terms and Conditions set forth in the Company’s invoices.

Isolatek International provides passive fireproofing materials under the CAFCO® trademark throughout the Americas and other markets and under the ISOLUTEK® trademark throughout the world.
